

GIS Capability Summary

Martin GIS Support

Services

• Geologic Map Digitization • GIS Database Development • Geodatabase Organization • GIS Compilation and Data Integration • Spatial Analysis • Cartographic Production • GIS Workflow Automation

Software

• QGIS • ArcGIS Pro • Python • GDAL • Global Mapper

Recent Example Project

Structural Control of Gold Deposits in the Kalgoorlie Region, Western Australia

Key GIS Tasks Performed

• Geological data integration • Structural dataset processing • Raster terrain analysis • Coordinate system management • Spatial querying • Buffer analysis • GIS database organization • Cartographic map production

This project demonstrates GIS workflows that are directly applicable to geological mapping programs, including geodatabase development, GIS compilation, spatial analysis, and preparation of publication-ready map products.
